

Smarter brushing

Oral B's must-have new power toothbrush

The technology that we take for granted in our cars, workplaces and homes seldom translate to the bathroom, until now. Triumph is Oral-B's most technologically advanced toothbrush system ever, with innovative Smart Technology that allows the brushhead and handle to work together to provide dentist-inspired feedback. While brushing, you are informed every thirty seconds to move on to another section of your mouth, and when your recommended two minutes of brushing is up. It has a pressure sensor that stops the bristles from pulsating when you brush too hard, maintaining healthy gums.

The Smart Technology recognises your brushhead as unique, allowing it to track usage and alert you when it's time to change. There is a choice of two brushheads – FlossAction™, with special MicroPulse™ bristles that penetrate deep between teeth for a floss-like clean; and ProBright™, with rotating-oscillating head technology to give you superior polishing and whitening*. Oral-B® Triumph™ has four modes for you to customise your brushing routine – clean, massage, soft mode for sensitive areas, and polish**.

Oral-B Triumph is available in larger Boots stores, rrp £164.99.
